

## **GGOzone** Whirlpool Sanitation System

- Effective - 200 times stronger than bleach
- Safe - Made naturally from oxygen
- Natural - Leaves no by-products in water
- Proven - Used over 100 years to sanitize water
- Maintenance Free - No need for adding additional solutions to disinfect your bath.

# Why our CUSTOMERS need Balboa Ozone

## 1 Balboa Ozone automatic sanitation systems

Introducing proven residential spa ozone technology into the Whirlpool Bath industry. The system infuses ozone's triatomic power (oxidation potential) into recirculating bath water. This helps neutralize sediments such as soaps, body oils, and other organic and inorganic materials that may be found in bath water and plumbing.

## 2 How does the Balboa Ozone system work?

When the tub circulation pump is turned on, the system begins operating in unison. Ozone gas is generated and immediately mixed into the recirculating bath water via the connection between the generator and a dedicated Ozone therapy jet. When the tub pump is turned off, the ozone generator circuit also turns off.

## 3 How does the Balboa Ozone create ozone?

The Ozone manufactured Corona Discharge (CD) generator splits Oxygen O<sub>2</sub> molecules into separate O<sub>1</sub> atoms. The O<sub>1</sub> atoms immediately bond loosely to adjacent O<sub>2</sub> molecules to form powerful O<sub>3</sub> ozone molecules.

## 4 Is the Balboa Ozone unit reliable?

With nearly 1,000,000 Ozone spa units installed worldwide (90% spa market share), this unit shares the same time-proven (and reliable) ozone generator technology for automatic ozone generation. Balboa design teams have engineered the system for easy installation, high reliability. The unit is EPA registered and UR recognized.

## 5 What other benefits does the Balboa Ozone unit provide to end users?

The unit eliminates the need to run caustic chlorine or other chemicals through the tub circulation system. The end user can simply fill the tub and run the jet pump (at least 15 minutes) to effectively sanitize the tub and internal components where potentially harmful organic matter grows. This eliminates a step that many tub owners fail to follow.

**EPA REGISTERED**  
**UR RECOGNIZED**
