

Manifolds Accessories

Your Single Source Supplier

- Meets ASTM standards
- Ports available in barbed or socket configurations
- The air manifolds reduce plumbing work which creates cleaner installations and less labor
- Air manifolds available in flow through only, however they can be capped to create a blind end

Manifolds Accessories

Faster installation. Better performance. Lower production costs.

Balboa Water Group air and water manifolds help spa jets perform uniformly and increase your assembly efficiency while lowering your costs. With manifolds, you can use one air or water source for multiple jets, reducing the amount of plumbing needed. This also helps to balance the flow between the jets, evenly distributing air or water.

- Reduced plumbing creates cleaner installations.
- Air manifolds are available with 4, 6, 12 and 16 ports.
- Water manifolds are available with 2, 3, 4 and 6 ports.
- Water manifolds are available in flow through and blind end configurations. Flow through manifolds let you chain manifolds to create the number of connections needed.
- Air manifolds are available in flow through only; however, they can be capped to create a blind end.
- Ports are available in barbed or socket configurations.
- Meets ASTM standards.

The Strength of an Industry Leader

Balboa Water Group provides a full range of industry-leading products engineered to offer consistency, high quality and long service life. Our experienced staff can supply consulting, design, and manufacturing support to help you achieve a particular stylized appearance, provide new capabilities, or offer a more economical alternative. Our customer service and distribution centers are strategically located to offer you immediate and reliable service.
